

ABSTRACT OF THE DISCLOSURE

10023083-121701

A plurality of terminal devices each for displaying information on its screen are interconnected for making communications with one another through a network. A terminal device that creates schedule data for displaying information on the screens of all the terminal devices at an arbitrary time delivers the schedule data to the other terminal devices through the network. Terminal devices that receive the schedule data reproduce the information associated with the schedule data from information previously recorded therein to display the same information on a plurality of screens in synchronization.
